

M2 培养基

货号: M2500

规格: 100mL

保存: 2-8°C保存，有效期 1 年。

Product Description:

M16 and M2 are modified Krebs-Ringer bicarbonate solutions, which are similar to Whitten's Medium. M16 Medium is one of the most common media for in vitro culture of preimplantation stage embryos. M16 contains pyruvate and lactate as energy sources since preimplantation embryos do not utilize glucose efficiently. M2 Medium is a further modification of M16 that substitutes HEPES buffer in place of some of the bicarbonate. M2 is used for collecting and handling embryos for prolonged periods outside a CO₂ incubator.

Formulation: Ready-to-use, sterile filtered solution

Component	Concentration (g/L)
CaCl ₂ •2H ₂ O	0.251
MgSO ₄ (anhydrous)	0.165
KCL	0.356
KH ₂ PO ₄	0.162
NaCl	5.532
NaHCO ₃	0.35
Albumin, Bovine Fraction V	4.0
D-Glucose	1.0
HEPES	5.43
Phenol Red•Na	0.01
Pyruvic Acid•Na	0.036
Lactic Acid•Na	4.35
Specifications	
pH	7.4±0.3
Osmolality (mOsm)	285±25
